

Frack Water Treatment System-

Utopia offers advanced Water Treatment Process for the Frack water of shore and On-Shore application. Utopia Advanced HDC Reactor is core of Treatment system. In HDC Reactor Advanced Oxidants are generated which oxidizes the organic and inorganic elements like metal impurities, Heavy metals, Organic Impurities etc.. which are converted in to setable form and separated in the tubes settler before discharge or reuse water is passed through online Disinfection device where all biological and Bacteria are killed

Advantages of Frack Water Treatment

- Low Operating Cost with Low Maintenance.
- Low Chemical Requirement during Operation.
- Online treatment with fast setting in Clarification.
- High Impurity Removal like Heavy Metal, Bacteria.
- Catalytic Polishing for conversion of Scalable element in to no scalable.
- Low Sludge Generation.
- Online Disinfection based on AOP avoids bio fooling and algae formation.
- Non Chlorine Storage and Handling.
- Improve System Operating Safety.
